"LIPSTICK" ETC.

SYNOPSIS

Camilla Hoyt, young and beautiful student in an art school, unconsciously sketches the head of a fellow student during the class and when she is supposed to be drawing a Grecian urn. The professor, looking at her sketch, embarrasses Camilla by having Peter Anson, the boy whose head she sketched, criticize her work before the class. Afterwards Camilla goes to the park outside to cry. A hand touches her shoulder. It turns out to be Peter, who apologizes for his action and consoles her. Camilla secretly adores him. He makes a date to see her that evening but is astounded when she names an expensive night club. It is far beyond his means but he resolves to go through with it. Peter takes her to the theatre first and then to the night club where they meet some of Camilla's friends. After taking her home, Peter resolves not to take Camilla out again, because of the expense. He is only a struggling artist. Camilla wonders why he did not ask her to go out again.

[Now Go On With the Story]

CHAPTER V.

Peter let himself into the ugly room which he shared with Gus Mattson. He deposited his blatant white paper and clumsy furnishings, but his artistic and imaginative eye looked beyond it to the beautiful studio suite that he would occupy some day, and endured it. Gus' hands were covered with gray modeling clay. He wore a soiled red suede jacket—Peter's—and smoked a briar pipe.

"This is a swell hour for you to be checking in," he reproached Peter. "Out with some skirt!"

"A girl," Peter corrected, hanging up his hat and coat.

"Another high-bat dame, I suppose, since you didn't invite me to the party. If you'd take my advice

plainly, well, c'mon, it's time we hit the hay."

"You insist on waiting up for me, don't you, mama?" Peter grinned with good humor. "I appreciate your concern, but really I'm a big boy now and can tuck myself in."

"You know I can't sleep while you're prowling around, and you might be considerate enough to turn in at a decent hour once in awhile."

Quarrelling with Gus was worse than arguing with a woman, because he not only had the last word, but he never sought a reconciliation later. Peter kept his silence. He was determined to see Gus through the year. Next month would be the end. He had offered to help him early in the year and had taken him in out of sympathy when he got down with pneumonia and almost developed tuberculosis, due partly to undernourishment. Gus was hanging on to finish National, with a tenuous grip on Peter; then he would show the world something, he boasted. Success to Gus was like a high dive—one big spectacular splash, and when he was made, Peter suspected that it was more of an endurance swim, for which he would have to train patiently.

The next few days went very badly for Peter. Professor Drake's class met only two days a week, so he did not see Camilla again until on Friday. She had feared that he would not communicate with her soon, hoped anxiously that he would, and plunged into humiliation and despair when he did not. One evening with her had been enough for him, she decided. A one-nighter she might have known. Handsome men like Peter invariably were concerned philanthropists. The conquest of a woman's heart did not appeal to him, because he knew

"Cost You Plenty, I'll Bet."

and quit tryin' to be a highbrow, you'd get farther," he sneered.

"It's the highbrows who will put me where I want to be, Gus, and you, too," Peter offered cheerfully. The scene was familiar to him. Gus had ambitions similar to his, but he was envious of Peter. His plain almost ugly face and sandy hair added nothing to an unattractive personality. He was clever at modeling and a hard worker, and Peter wished mightily that he could persuade Gus to cultivate more gracefulness. He was fond of the fellow in a way. But Gus scorned all such suggestions, believing that he knew all about the proper attitude toward a hard-boiled world. At the same time he profited by other advantages which his association with Peter afforded him. Obligated as he was to economize, Peter never was penurious, and his personal charm enabled him to earn more than Gus, who resented that his friend was favored everywhere; by the teachers, the landlady, employers, friends and acquaintances. Peter was popular everywhere Gus was an outsider—only Peter's friend, which tendered him a certain advantage.

"Cost you plenty, too, I'll bet," Gus continued his reproach.

"Too much," Peter conceded. "But it was worth it."

"Is he going to finance you for a couple of years in Paris?"

"No—oh, no—I only meant that being with her tonight was worth the money it cost me."

Gus snorted. "If you don't watch your step, you'll be falling for some dame and lose your balance com-

that he could have any woman of his choice without a conquest.

She wished miserably that she had refused to go out with him the first time he asked her. That might have stimulated his interest for a longer time. Then, what if he never asked her again? At least, she had one sweet memory to cherish in her heart through the long bleak years ahead. They were going to be so desolate—without Peter.

Their greeting, the next time they met, was constrained. Camilla was aloof because he had made no attempt to see her again. Peter was reticent because there wasn't a chance that he could ask her for another date. Seeing their cool hostility, no one could have guessed that a few evenings previously they had danced in ecstatic embrace, been oblivious of the world in their thoughts of each other.

Peter astonished the professor with the worst work he ever had done and Camilla astonished even herself by doing her best. Such is the illogical effect of youthful love. But Camilla was spunky and determined. Whenever she resolved to do a thing, she did it completely. Her latest resolution was to show Peter Anson that she had completely forgotten him and was devoting herself to her work. So when Professor Drake exhibited her work to the class as the best for the day, her triumph was sweet. The moment class was dismissed she hurried away without a backward glance. Professor Drake detained Peter. "What's the matter, Anson? Not keeping late hours, I hope?"

"No, sir," soberly. "My old day, I guess."

"Well, you can't afford to have many of those if you maintain your record. By the way, you are planning to compete for the Paris scholarship award in the fall, aren't you?"

"I planned to. But—"

"There can be no exception to the plan. I expect you to have an entry in the exhibit."

"I'll try for it."

"Something is wrong, Anson. Is there anything I can do?"

Peter's head went up defiantly. "Thank you, sir. No, there's nothing you can do. I'll manage somehow."

"Then if I can be of any assistance in advising you about the exhibit, let me know."

"Thanks. I'll do that." Peter escaped his quizzical inspection and swung through the entrance of the building into the path which cut through the park toward the museum. He usually took the shorter way, and it was on one of the benches near the lilac hedge that he had found Camilla several days before. She, not knowing that he passed that way often, had gone there directly from class, to be alone and think what to do about Peter.

He found her there again. She was not crying this time. He knew that he saw him, he knew by the forlorn little picture she made, that she was afflicted with the blackie-blues again. Why a girl like Camilla should have any kind of blues was beyond his imagination. She had the world at her feet. She didn't know what real trouble was, so the least difficulty assumed exaggerated proportions for her.

His step on the path startled her. "Oh!" she exclaimed and flushed.

He had been startled, too, seeing her there where they had talked together, but had had a moment to calm his violent reactions before she discovered him.

He smiled ruefully. "Is this a favorite rendezvous of yours?"

"This is a public park, isn't it?" she retorted with a calmness that belied the furious beating of her heart which his sudden appearance had disturbed. Always, she felt as if she must resent anything Peter Anson said to her, at the same time that she wanted so much for him to talk to her. And wondered why she could not send him so much when she loved him so.

"Why—of course," his tone was puzzled at the defense in her voice. "That is why I take this path from the art school to the museum. And because I like to walk here, especially now when the lilacs are in bloom."

"That is why I like to come here, too," her voice was softer and she looked up at him with a timid smile. (To be continued.)

Brought Large Cargo

S.S. Pennyworth Unloads Merchandise Consigned To Western Ports

The steamer "Pennyworth" unloaded at Churchill over a thousand tons of mixed freight consigned to all parts of the Canadian west.

Everything from candy and fine whiskey to Bibles and paste was taken from the holds by stevedores as the port unloaded the largest incoming cargo it had ever seen, brought in by the "Pennyworth" when the ship, the first of the season, arrived from Glasgow, Newcastle and Antwerp.

From Glasgow came forty tons of beer and whiskies consigned to the liquor control boards of Manitoba and Saskatchewan, two tons of window glass for Regina and Saskatoon, 20 tons of firebricks and fireclay for Saskatoon, two tons of schoolbooks addressed to the Department of Education at Regina, and ten tons of cream separators going to Saskatoon.

Most of the coal came from the Tyne, and with it from Newcastle came 6,000 cases, totalling 50 tons, of confectionery, including 19 tons of toffee and 24 tons of licorice, all consigned to the children of Winnipeg; 216 tons of barbed wire, 800 pounds of Bibles, consigned to Saskatoon; 1,500 pounds of paint going to the king's printer at Regina, and 240 pounds of "educational apparatus," including ammonia, sulphuric acid and nitric acid, destined for the Balfour technical school in Regina. The king's printer in Regina is receiving also 1,700 pounds of bottled ink, while the Saskatchewan government is receiving the consignees of six more tons of Tyne-side beer. Steel castings are being shipped to the Hudson Bay Company at Flin Flon, and 73 tons of sulphates are going to Regina and Saskatoon.

Height of forehead is no sign of superior intelligence according to one expert, who found that the Eskimos of Alaska are among the highest-browed people in the world.

Holland has reopened a number of metal industry plants.

"The world owes a man a living" sounds all right—but you will notice that while nature places the berries on the raspberry bushes, the people have to do the picking if they want any berries.

Austrians are smoking more cigarettes this year than last.

"I would call it subsidized exportation," he explained. In response to questions, however, he said his program likely would produce anti-dumping regulations from European countries.

His intention, stated he, was to bring the exports of American wheat up to the normal movement of the past.

The Seven Years' War

Was First World War and Had Far-reaching Effects

Every generation likes to think that it has done something bigger than any other generation. So it is natural that our, having waged a really big military contest, should point to it proudly as the first World War. A book has even appeared with that title. But what we know as the World War was not the first one. There is at least one other which deserves the title even more, if that be possible—a war which in its effects dwarfed even the gigantic struggle of our own day. That, of course, is the Seven Years' War of 1756 to 1763, known on this side of the water as the French and Indian War. The fate of the thirteen colonies, of Canada and of India hung in the balance in that mighty combat. Were they to be French or English?

Not were the important operations confined to the Eastern Hemisphere, as they were in our World War. On the contrary, one of the chief decisive actions took place over here—the battle of Quebec. In number of men, in scope of ammunition, cost in money and life—in a word, in everything which can be reckoned mathematically—our World War naturally holds the record. Being the first thing of its kind since the invention of the steam engine, it inevitably would. But in the instance of our war, the hemisphere it must yield to its eighteenth-century predecessor which caused the transfer of Canada and India from France to Great Britain and started Germany on the road to power.

It was of this war that Macaulay, writing to Frederick's seizure of Silesia, thus making the famous Pragmatic Sanction a mere scrap of paper, penned one of his most striking passages:

"The whole world sprang to arms. On the head of Frederick is all the blood which was shed in a war which during many years and in every quarter of the globe. The evils produced by his wickedness were felt in lands where the name of Prussia was unknown; and, in order that he might rob a neighbor whom he had promised to defend, black men fought in the coast of Guiana, and red men scalped each other by the Great Lakes of North America."

What Seemed Like Fantastic Dream Now Virtually a Reality

Aviation's once fantastic dream of conducting a regular trans-Atlantic service with the use of floating airports has virtually become a reality.

Following successful tests with the steamship "Westphalen" anchored in mid-Atlantic between Africa and Brazil, the German "Lufthansa" plans to inaugurate in the autumn an airmail service between Germany and Buenos Aires, Rio de Janeiro and other South American ports.

Two planes will be used, each making half of the ocean trip. Terminal points will be Bathurst, British Africa, and Natal, Brazil. The plane, for example, which departs from Bathurst will proceed to the steamer (one day's flight), transfer its mail to the second plane, which will then be catapulted on the second stage of the journey (also a day's flight) to Natal.

Aboard the floating airport, the waiting plane will be thoroughly checked over and refueled for the return trip.

Each plane will carry a personnel of three men, including a radio operator. Mail will be brought to, and taken from, each terminal point by land planes.

Lufthansa officials told the United Press that the two-and-a-half-months' tests entirely proved the practicability of the project. It is now planned to purchase and equip a second vessel as a relief for the "Westphalen."

Subsidized Wheat

U.S. Plan To Protect The Primary Producers

If necessary to protect wheat producers from price-depressing surpluses, Secretary of Agriculture Wallace said the United States is ready to subsidize exports and to employ the "full powers" of the Farm Act.

In a formal statement, he explained this course would be followed in the event of failure by the principal wheat producing nations to arrive at an international agreement to curb the surplus.

Wallace said orally at his press conference his program could not properly be called "dumping." He said he understood the word to mean the sale abroad at sacrifice prices of quantities of a product in excess of normal export.

His intention, stated he, was to bring the exports of American wheat up to the normal movement of the past.

"I would call it subsidized exportation," he explained. In response to questions, however, he said his program likely would produce anti-dumping regulations from European countries.

NEW COMMISSIONER

Sir Edgar Rennie Bowring, who has been appointed Newfoundland High Commissioner in London in place of Mr. D. J. Davis, present Acting High Commissioner, who has been appointed chairman of the Newfoundland Fisheries Board.

Advance In Wireless

Communication With Micro Waves

Communication with micro waves a foot and a half long over distances greater than the range of vision and through or around physical obstacles was reported before the science department of the Royal Academy by Guglielmo Marconi, noted wireless inventor of Italy.

Engineers had believed such opaque objects as buildings, mountains, etc., had the same effect on these waves as would be in the case with a searchlight or other form of light beam.

In a series of tests conducted between the inventor's yacht, "Electra," in the Tyrrhenian sea, and inland Italy, Marconi said that both radio-phones and radiotelegraph messages had been exchanged with the experimental station at Santa Margherita, 85 miles landward, a distance three times further than he had been able to get heretofore.

Even with the "Electra" anchored at Porto Santo Stefano, a distance of 101 miles from Santa Margherita, faint code messages on a 60-centimetre wave were picked up on the yacht despite two intervening mountainous promontories, indicating that the micro waves were not hindered by opaque objects.

Twenty-five watts of power were used, Marconi said, in a newly developed micro-wave combined transmitter and receiver. He added that he hoped through the development of more sensitive apparatus to be able to bring about further important advancements in the art of radio communication.

Japan Stages Sham Battle

Elaborate Performance Of Aerial Attack Seen By Millions

Fifteen million people in Tokyo and surrounding prefectures watched war-time life when a three-day sham battle for possession of the capital was launched by the army and the navy.

Three times during the day "enemy" aeroplanes roared overhead and sirens scattered warnings to the populace. Smoke bombs and vari-colored vapors were loosed in the streets, simulating poison gas and incendiary explosives.

Emergency hospitals were set up and to them stretcherbearers wearing gas masks, carried the supposed wounded, while from public parks and the roofs of big department stores anti-aircraft guns and machine-guns boomed and chattered.

There was one genuine casualty. A girl watching coasted over the air raids from a roof fell and was killed.

The assumption was that the air raiders came from enemy battleships approaching Tokyo Bay from the mid-Pacific. The whole show formed the second phase of the grand air manoeuvres of the navy.

Women Detectives

Three Women Appointed To Staff Of Scotland Yard

Three women have been appointed as permanent members of the detective staff at Scotland Yard for the first time in the history of the metropolitan police.

The innovation, the latest of many reforms recently initiated by Lord Trenchard, the chief commissioner, followed experimental tests of women's aptitude for criminal investigation which proved eminently successful.

Sheep In Long Trek

After passing through country generally considered impassable, Drover Jack Brady and eight helpers have just completed a drive of 7,500 sheep for 1,300 miles from Mackinlay to Snowtown, Australia. To water the animals in desert spots a pumping plant and troughing was carried. The trip required 20 weeks and at night a guard against raids by wild dogs was necessary. Only 300 sheep died on the trip.

Poor Economy

Just at a time when the whole country is overrun with thousands of unemployed, and when the services of a police force is very necessary, the officials in charge of the R.C.M.P. have decided to take the detachment from Lacombe, and transfer it to Rimby. No doubt, Rimby District needs more protection than it has had in the past, it being a comparatively newly settled district, especially the country west of the town, and one officer will have his hands full taking care of it.

In normal times Central Alberta needs very little policing, but with the influx of men from the coast and other parts of the Dominion, petty crime is on the increase, and with insufficient police protection will probably develop into a more serious menace. The one officer who will look after this thickly settled portion of the Province will be located at Red Deer, and as his work will take him through a radius of about fifty miles, it must be evident to the powers that be that the protection he can give will be very limited. It looks like poor economy, and this move should be reconsidered.

Another move for "economy" was the taking away of the steel cell placed here by the Police some years ago. Although they have several of these cells in Red Deer which have never been used, this fact was overlooked, and Lacombe will now be put to the expense of installing a new one.

WILL OPEN KINDERGARTEN

Mrs. W. D. Murphy, an experienced Kindergarten Teacher, will open a Kindergarten School in Lacombe, commencing on September 11th. The school will be held in her residence opposite the Hospital, and parents of children from the age of three to six may interview her there. Modeling, paper construction, expression, singing games and simple forms of folk dancing will be taught.

ANNOUNCEMENT

We wish to announce that we have purchased the interests of the late Lin Tom in the Star Cafe, and starting Sept. 1st it will be under the management of George and Fong. Fong Hin will continue in charge and while thanking all his old customers for their valued patronage, Fong personally solicits a continuance of their patronage and invites the general public to call at the Star Cafe when away from home.

You will get personal service at the Star Cafe.

A Woman at Banff

I know God fashioned little fields
So they would be
A comfort for old homely folk
Like you and me.

Small gardens with their fences
Rings and light,
And tiny gates to shut us
From the night.
But THIS He made with
Glory in His veins,

This solitude, where Might
Forever reigns,
Molded the hills with glad
Exultant hands,
Shaping the valleys for
Wide pasture lands.
And so this towering peak
Forever bears,
Old finger-marks upon
Its rugged stairs.

And every shining height
Reflects the glow
Of some white virgin field
Of drifted snow,
And over it he laid
With loving care,
The mantle of His peace
Forever there.

SOURD ON THE WORLD?—THAT'S LIVER

Wake up your Liver Bile

—No Calomel necessary

Many people who feel sour, sluggish and generally wretched make the mistake of taking calomel, or other purgatives, instead of using the Sufferer's Friend.

What you need is to wake up your liver bile. You can do this by taking the Sufferer's Friend. It is a natural, safe, and effective remedy for all liver and bile troubles. It will soon fix you up. Purely vegetable. Safe. Sufferer's Friend. See at all druggists.

Here and There

Taken as a whole the British West Indies as a market for Canadian products ranked tenth last July with \$550,000, with Newfoundland coming next.

Increasing prosperity in Canada and the United States is seen in the early arrival in the Dominion of United States Christmas tree buyers. They are particularly busy in the Maritimes where the demand is especially heavy.

Edward C. Carter, of New York, traveller and publicist, has been chosen to fill the newly-created post of secretary-general of the Institute of Pacific Relations which has just completed its fifth biennial conference at the Banff Springs Hotel.

Eleven happy boys took the eleventh annual "On to Alaska" tour this year under the leadership of George E. Buchanan, of Detroit. Their trip included a stop at the Banff Springs Hotel where the boys stayed until they entrained for Lake Louise.

Traffic earnings of the Canadian railways for July show an aggregate gain of nearly a million dollars as compared with July, 1932, the best showing in many months on similar comparisons. Gross earnings of the Canadian Pacific account for \$473,000 of this gain during the month.

"He got you that time," said Mrs. Moutagu Norman to the governor of the Bank of England, when they landed recently at Quebec from Canadian Pacific liner, Duchess of Athol, on their way to Bar Harbor, Maine. The purpose of the visit is a mystery, not even a holiday. "ing admitted by the distinguished visitor."

John Nelson, president of Rotary International, sailed recently by Empress of Britain on his way to Lausanne where the second European regional conference of the world-wide organization was held this month. He stated that Rotary had 150,000 members in 300 clubs.

FUNERAL OF DAVID ALBERT SAUVE

The funeral of D. A. J. Sauve, who was killed in a car wreck a few days ago, was held on Sunday, Aug. 27, service being conducted by Rev. E. B. Layton, in St. Andrew's United Church. He was laid to rest in Lacombe cemetery. There was a very large number of friends of the family present, and many beautiful floral tokens of sympathy. He leaves to mourn his loss his young wife and four-month-old daughter; his father, mother, five brothers and three sisters, all at home.

ST. ANDREW'S CHURCH

Pastor: Rev. E. B. Layton
Musical Director
Mr. L. D. Wright, G.U.E.C.C.
Sunday, Sept. 10th
Morning Service, 11:00 a.m.
Anthem: "Anywhere with Jesus."
7:30 p.m. Evening service.
Anthem: "How Beautiful are Their Feet."

The regular meeting of the Board of Managers will be held on Tuesday evening, Sept. 12, at 8:00 in the schoolroom of the Church.

Junior Choir will please meet for practice on Thursday evening at 7:00 and Senior Choir at 8:00.

The Ladies' Guild will hold their regular monthly meeting at the home of Mrs. J. N. B. MacDonald, on Wednesday afternoon, Sept. 13th. Meeting for Bibles Study on Wednesday evenings at 8:00 o'clock.

Mr. W. D. Murphy, formerly manager of the Alberta Pacific Elevator here, and who suffered a serious accident some months ago, is, we are pleased to note, recovering satisfactorily, although slowly, from its effects.

Prof. W. M. M. Touche, for many years teacher of violin, piano and voice in Lacombe, and for several years musical director at St. Andrew's United Church here, left today on a bicycle trip to Chicago, Ill. Mr. Touche expects it will take him approximately 6 weeks to complete the trip, the distance being in the neighborhood of 2500 miles. He expects to be in Calgary Saturday and from there will strike out for Indian Head, Saskatchewan, and thence to Winnipeg, and East. He had intended leaving on Monday, but the heavy rain and extremely cold weather delayed him until today. Mr. Touche, will visit with his mother in Chicago, it being many years since he has seen her, and he expects to spend several months cycling in the United States. His many friends and former pupils in Lacombe wish him the best of luck on his long trip.

It is better tea

A Call To Service.

The prairie provinces of Canada are again this year faced with the heavy losses, and the resulting problems, which another crop failure over extensive areas brings in its wake. The Western United States are in the same deplorable state. Drouth, grasshoppers and other insect pests, wind and hail, have all taken their toll, and hundreds of farmers for the third, fourth, even fifth year in succession have nothing to show for their year's labor. It is a discouraging situation.

According to the reports of the Dominion Bureau of Statistics the yield of wheat will be the smallest, with the exception of one year, since reports began to be compiled by the Bureau 25 years ago. What is true of wheat is true of other grains. Officials and inspectors of the Saskatchewan Relief Commission state that the relief problem will be as great, if not greater, than in any previous year in that province, while a Manitoba cabinet minister is reported as saying that 2,000 farmers in one section of that province will not thresh a bushel of wheat.

The enormous direct loss thus imposed on the people of Western Canada, and the largely reduced purchasing power of this country, will have a direct and adverse effect upon employment not only throughout the West but in the factories of Eastern Canada, upon our railways, and upon our national, provincial and municipal finances.

Governmental relief must be forthcoming to meet all absolute needs of people, to prevent actual suffering, to conserve the health of people—in a word, to sustain them and provide for their needs for another year at least. This is the least that any government can do for its people; it is, in fact, a primary responsibility of any government, a duty that must be discharged.

There have been periods of crop failure all down through the ages and in all countries, and governments have had to care for their people. But plenty has also always followed famine. Discouraging as the present outlook may be, there is no cause for despair. People will be provided with the necessities of life; they are not going to be left to starve and starve. They will have nothing to show for their year's work, it is true, but they will be able to start again next year.

But there is surely something that people can do for each other in times of discouragement and need like the present. There must be scores of ways in which people can assist and encourage each other even though they may have little in the way of available resources. While Governments meet absolutely essential needs, cannot people through voluntary effort of their many organizations, and as individuals, extend not merely sympathy but practical encouragement and help to others who have suffered greatly more severely and are in danger of losing confidence in themselves, in their country, in mankind itself?

In this connection it is gratifying to read of the action taken by the citizens of Kerrobert, town and district in Saskatchewan. Representative citizens have banded themselves together, and are promoting a relief organization for their district, which will not interfere in any way with the work of the rural, municipal, or town councils, or government relief, but which will be supplementary to all these official agencies. These citizens will themselves bring that sympathetic human touch, and provide assistance in various forms which no official body can do, but which are so essential in maintaining the morale of people.

Voluntary organizations of all kinds throughout Western Canada should appreciate the fact that, whatever the object of their organization, there is no finer, better, more important and necessary work they can do this winter than in extending co-operation in all measures of relief. There is really little excuse for the existence of any organization in our community life which does not at a time like the present forget all else but the welfare of people who are in need, and arouse its membership to assist in meeting those needs whatever they may be.

The State, representing all the people, will discharge its obligations, but at the great heart of humanity as represented by each and every one of us, and by so many of us organized under different names and for many different purposes, respond to the call, carry all the cheer that is possible into the discouraged homes, scatter all the sunshine that can possibly be spread about, and thus bring encouragement to those who are inclined to think there is no longer even hope left to them.

Functions Of Central Bank

Would Not Necessarily Do Away With The Present System

Warning Canadian economists adopting the view that the particular function of a central bank, in the event such is established in Canada, is to extend credit to agriculture, was given by Professor T. E. Gregory, British economist, who addressed the Canadian Club in Regina.

"It is fundamental to my view of central banking that it should keep its hands off any one particular industry," said Professor Gregory, "whose address dealt with the subject of central banking. W. G. L. presided at the meeting."

If Canada, as a result of the work of the MacMillan commission established a central bank it would not necessitate doing away with the present banking system, he said.

Ocean Space Limited

A considerable number of cattle are finished and now available for export. Ocean space, however, seems to be inadequate to meet the requirements of many producers who wish to export their own live stock. Due to the steady flow of cattle leaving Canada, this condition should remedy itself in due course. Intending shippers should try to secure space prior to the contemplated date of shipping.

It would take fifty bottles the size of the moon to form one mass as big as our earth.

India is importing more commercial motor vehicles.

An Unusual Experience

Aviators Crossed North Atlantic Ocean Without Seeing It

Possibly, one of the most remarkable long-distance flights ever made was that by Paul Odos and Maurice Rossi, who left New York and landed at a point in Asia Minor 5,900 miles away.

The New York Times carried an account of the voyage as far as Paris, where the material was dropped from the plane as it passed over the city, and then landed at the Times.

The story is good, but the most unusual statement is contained in the following paragraph: "We crossed the North Atlantic ocean from Halifax to Cherbourg (France) without seeing the ocean. Zones of depression and sea of clouds prevented our seeing what we should have liked to see."

That, we believe, is about as unusual an experience as could well be recorded. Crossing the ocean and never seeing it!

Barley Staple Crop In Japan

Barley, naked barley (rye) and wheat constitute the staple crops raised on the upland farms in Japan. Owing to the high protein content and excellent milling qualities of Canadian hard wheat, the Japanese use it in a standard mixing substance with the softer wheats from the other countries from which Japan draws her supplies.

Cigarettes smoked in Australia

In the last year averaged 875 per each person.

Forty thousand marriages are celebrated in London every year.

Summer Complaint Plays Havoc With the Bowels

Few people escape an attack of summer complaint. It may be slight or it may be severe, but both the young and the old are liable to it during the summer months. You cannot tell when it seizes you how it is going to end. Let it run for a day or two and see how weak and prostrate it will leave you.

On the first sign of an attack of any looseness of the bowels take a few doses of Dr. Fowler's Extract of Wild Strawberry and see how quickly it will give relief. Manufactured only by The T. Milburn Co., Limited, Toronto, Ont.

The Age of Aluminum

Two Railroad Cars Made Of This Metal Exhibited At Chicago

David Dietz, in an article in New York World-Telegram, says: "Two all-aluminum railroad cars are among the most interesting and most important exhibits in the Hall of Transportation at the Chicago Century of Progress World Fair."

One is a combination of coach, parlor and observation car facilities. The other is a combination of sleeper, parlor and observation car. Both are gleaming, inviting works of art. On the day I visited the Hall of Transportation thermometers were registering a temperature of 100 on the sidewalks of Chicago, and the air-cooled interiors of these two cars were the most comfortable spots on the fair grounds.

The bodies and trucks of these two cars, with the exception of the springs, axles and wheels, are made entirely of aluminum. This is the first time that this has been accomplished, though aluminum car bodies were fabricated two years ago.

To many engineers, these aluminum cars represent the direction in which the railroads must go to recover their business. In other words, they must make travel by rail so attractive and inviting that tourists will prefer it to their own automobiles.

But in addition, many engineers see more than railroad recovery in these two cars. To them they are the symbol of the new age, the Age of Aluminum.

Many railroads are beginning to turn their attention to the subject of aluminum rolling stock.

DRIVES HIMSELF TO WORK AT 82

And Still Plays a Little Golf

How many of us, when we are 82, will be equal in health and activity of this vigorous old Scottish engineer? In a letter he says: "I arrived here from Scotland on the 7th April, 1870. I am over 82 years old. I drive my Ford Car 40 miles over hills and dales to the factory, and can still play a little golf. I have taken the little dose of Kruschen Salts in my cup of coffee for some years, and I believe it is keeping me in good health and enabling me to keep on working at the factories as engineer."

Whether you are still in your 'teens or past your prime, it is neither too early nor too late to start on the "little daily dose." Just a tiny, tasteless pinch of Kruschen Salts in your cup of tea or coffee. They ensure internal cleanliness, keep the blood-stream pure. New and refreshed blood is the springing to every fibre of your being. Rheumatism, headaches, indigestion and backache all pass you by.

Cod Liver Oil For Hens

Makes Them Produce Larger and Better Eggs Says Expert

Give a hen cod liver oil and she will lay better eggs, the International Bitter Cod Liver Oil was informed at Grand Rapids, Michigan.

A cod liver oil feeding experiment in England was described which resulted in eggs weighing an ounce more per dozen. To the consumer this extra weight was said to be equal to adding one large egg for every two dozen in the average market size.

The report was made by Dr. R. T. Parkhurst, of the National Oil Products Company, Harrison, N.J., who performed the feeding tests while director of the National Institute of Poultry Research, England. The hens in that experiment were White Leghorns and White Wyandottes.

There are two important methods, Dr. Parkhurst said, to get larger eggs. One is by breeding, and the other by the right kinds of chicken feeds.

Hens of different nationalities seem to have different tastes in feed. In England, Dr. Parkhurst said, low protein rations gave eggs just as large as high protein diets. But in Maryland egg sizes were increased by feeding the hens more proteins.

Submerged Village Uncovered

A fishing village near Tellicherry, North Malabar, with a temple at one end, was submerged by the sea in 1895. With the coming of the 1933 monsoons the village gradually is being uncovered. An extensive stretch of sand has emerged connecting the site of the village with the mainland and people are visiting it searching for relics.

Wins Grain Race

First to arrive in Europe in the great annual grain race this year was the German four-masted bark "Prinwall." She left Port Victoria, Australia, on January 18 and took 100 days to reach home waters and 106 days to arrive at Barry, England, where she unloaded 4,620 tons of bagged wheat. Eight vessels were in the race.

Canadian apples are becoming increasingly popular with the British consumer, and are crowding aside their well-known competitors. Introduction to this fruit means a lifelong friendship.

At 452 degrees below zero some metals, such as silver and copper, lose their resistance to electricity, becoming superconductors.

Bermuda Is Fortunate

Taxers Are Light and Invested Capital Reluctant To Leave The Island

The town colony of Bermuda has met and conquered a grave financial emergency.

A few weeks ago Bermuda found her revenues falling short of expenditures, for the first time in recent history. Down there, they had heard tourists talk about a depression, but this was their first evidence of it which seemed to demand action.

So a special session of the parliament of Bermuda was summoned, and when it was prorogued, by the Governor, Sir Thomas Astley Cubitt, K.C.B., C.M.G., D.S.O., the budget had been balanced and all was well again with the land "that is different."

Ordinarily a budget is balanced by higher taxes or reduced expenditures or a combination of the two. Bermuda doesn't do things so harshly. The island legislators didn't follow either plan. They had an ace in the hole, these shrewd legislators who come mostly from a few wealthy families which have governed Bermuda for a couple of centuries.

"A prompt realization," says an official bulletin, "of the substantial profits accruing to the colony by a heavy appreciation in the value of invested reserves and a utilization of these profits for budget-balancing purposes" was the course adopted by the others whose money comes out of invested capital.

Bermuda has no income tax, no sales tax, no burdensome levies of any kind. Taxes are light, life is easy, and nobody worries about the colonial status of the island in the world. Tourists are admitted freely—and taxed ten shillings when they leave—but the purchase of property by outsiders, the purchase or establishment of a business, taking a job might be filled by a resident, are privileges closely guarded by the government and the "family circle."

"These fortunate Isles" is the phrase of the official Bermuda News Bureau. These Isles where the depression hit four years late—and so mildly that it has been met without raising taxes! What a country!—Ottawa Journal.

Looking For Increase In Cattle Exports

May Treble Last Year's Is Opinion Of Jack Byers

Jack Byers, newly appointed manager of the Western Stock Growers' Association, expects cattle exports to Great Britain will be trebled this season compared with last. Proposed consolidation of three leading cattle exporters in the west may be an important factor in the increase, he said.

President of the Western Stock Growers' Association, council of Western Beef Producers and the Red Label Beef Growers' Association have approved the co-ordination of export effort. It is hoped to have one central body to the general public, the beef producer and market his surplus livestock, whether it be for export, to the feed lots in western Canada, or feeder cattle from the producer to the feeder in western or eastern Canada.

Mr. Byers gave approximate export figures in British cattle trade. In 1931, he said, 30,000 head were shipped from Canada and last year the figure fell to 17,000. Already this year, however, 30,000 have been shipped and he estimated 20,000 more would be shipped before the close of navigation.

There is an unlimited market in England for the right type of Canadian cattle, Mr. Byers stated. One of the main difficulties encountered by exporters has been obtaining sufficient port space, but he said the combined cattle organizations would seek to arrange for space before the opening of navigation next year.

Highest Railway In World

Line Linking Peruvian Towns Is Remarkable Engineering Feat

The highest railway in the world, belonging to the Peruvian Corporation, links Oroya with Lima by means of a pass, 15,802 feet high, and a series of stupendous curves which constitute a remarkable engineering feat. Along this line the climate changes from semi-arctic to semi-tropical. At one end there is an excellent cattle country, where the large estates measure up to 250,000 acres. At the other is cotton, sugar or fruit. For Peru can grow anything she is potentially self-supporting. She has coal at Cerro del Pasco as well as a number of important minerals, and unlimited oil in the north. Every kind of crop could be produced at different levels. There is particularly good wheat land near Arequipa, but production and development are arrested by the character of the people.

Parisians can now read the time on a clock erected on the Eiffel Tower; the dial of this timepiece, which is illuminated at night, is sixty-one feet, and it is placed at a height of over 600 feet.

It takes a ton of carbonate, a radium-bearing ore, to yield an amount of radium equal to weight to an ordinary pin head. This amount is worth about \$10,000.

Razor Blades FREE with POKER HANDS!

You can get these five keen, well-honed safety razor blades (fit any Gillette-type razor). Given free for just one complete set of Turret Poker Hands... any man would appreciate such a gift!

Mild, yet sweet and full of flavour—Turret Fine Cut is a particular favourite with men who "roll their own." A 20 cent package of this mellow Virginia Tobacco will make at least 50 cigarettes... in it are combined satisfaction and genuine economy.

It pays to "Roll Your Own" with TURRET FINE CUT CIGARETTE TOBACCO SAVE THE POKER HANDS

Poor Crop In Canada

Wheat Crop Lowest In 25 Years With One Exception

Agricultural experts thumb record books, comparing crop conditions with those in past years. This is what they found:

The condition of the Canadian wheat crop is the lowest in the records of the Dominion Bureau of Statistics, going back 25 years, with the exception of 1931.

The barley crop is in the same position as wheat—the lowest in 25 years with the exception of 1931.

The flax and oat crops are the lowest in the records of the bureau.

Only once, in 1914, were Canadian pastures in worse condition. The crop year 1931 was particularly bad for Canada because of drought conditions throughout the southern growing areas of the prairies, particularly Saskatchewan. This year drouth and heat, reinforced by plagues of grasshoppers, have taken a toll of millions of dollars. Dry weather this year extended from Quebec westward to the Pacific coast.

Agrees On Wave Lengths

Canada Satisfied With Agreement For Radio Outside Broadcasting

Judge E. O. Sykes, of Mississippi, chairman of the United States radio delegation to Mexico City, in a press statement, said Canada and the other eight North and Central American countries represented at the recent radio conference, reached entire agreement regarding frequencies or radio outside broadcasting. He mentioned in this statement, station television, aircraft, state police, point to point telephone and telegraph, coastal telegraph and telephone, ship telegraph and telephone and amateur.

He further said agreements reached on technical matters relating to broadcasting would be of great benefit. While the conference failed to reach agreement on assignment of channels for broadcasting to various countries, it agreed on certain technical regulations of this class of radio.

Abandon Trackage

United States Railways Find Truck And Motor Bus Best Business

A combination of factors, of which the primary one is to be the rapid development of hard-surfaced highways, is causing the railroads of the United States to abandon trackage at a greater rate than ever before.

Figures in interstate commerce commission reports show 1,800 miles of track were abandoned in the nine months ending August 1, which nearly doubles the 945 miles abandoned in the entire year ending November 1, 1932.

Gardens Are Spoiled

Once famous for their beauty the flower gardens of Seville, Spain, have been turned into cabbage patches. Anarchists are reported to have invaded buildings erected for the art exhibition and are living in them rent free. They recently, uprooted the rose trees and other flowers in the grounds.

While the human population of the world is estimated at 1,849,500,000, the rat population is placed at 10,000,000,000 or at the proportion of six to every human being.

Gold produced in the Transvaal in September weighed 961,501 fin ounces.

IT'S LIVER THAT MAKES YOU FEEL SO WRETCHED

Wake up your Liver Bile —No Calomel necessary— You try to feel healthy and happy, you know you must have a good liver. But if your liver is not working properly, you will feel wretched. You will feel tired, you will feel sick, you will feel nervous, you will feel depressed. You will feel that you are not getting any enjoyment out of life. You will feel that you are not getting any rest or sleep. You will feel that you are not getting any strength or energy. You will feel that you are not getting any happiness or contentment. You will feel that you are not getting any peace or quietude. You will feel that you are not getting any joy or pleasure. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. You will feel that you are not getting any honor or prestige. You will feel that you are not getting any respect or admiration. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. You will feel that you are not getting any honor or prestige. You will feel that you are not getting any respect or admiration. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. You will feel that you are not getting any honor or prestige. You will feel that you are not getting any respect or admiration. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. You will feel that you are not getting any honor or prestige. You will feel that you are not getting any respect or admiration. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. You will feel that you are not getting any honor or prestige. You will feel that you are not getting any respect or admiration. You will feel that you are not getting any love or affection. You will feel that you are not getting any respect or honor. You will feel that you are not getting any success or achievement. You will feel that you are not getting any fulfillment or satisfaction. You will feel that you are not getting any meaning or purpose in life. You will feel that you are not getting any hope or faith. You will feel that you are not getting any courage or bravery. You will feel that you are not getting any wisdom or knowledge. You will feel that you are not getting any power or influence. You will feel that you are not getting any wealth or riches. You will feel that you are not getting any fame or glory. Tests Are Being Made In Extensive Program To Improve Quality Of Western Wheat

Details of an extensive program to improve western wheat crops and thereby raise the premium which Canada obtains on world markets for her grain were revealed by Dr. L. H. Newman, Dominion cerealist from Ottawa, who is carrying out tests of the west with Major H. G. L. Strange, former wheat king of the world.

Description of the extensive scheme was given by Dr. Newman in this manner: "We are endeavoring," he said, "to obtain a picture of the varieties of wheat being grown across the northern farm belt to learn where the grain is fairly pure and where it is badly mixed. Now that we are getting this picture we are trying to improve the seed used by the farmers."

"Last fall," the cerealist explained, "samples of grain were collected from 6,100 farm wagons at country elevator points and this year grain has been grown from this seed. We established 16 group points with about 400 small plots at each. Now we are going over grain samples at each place. Field days, too, are being held simultaneously with the identification of the varieties."

"In some cases, the farmers did not even know the names of the varieties of wheat they were growing. The farmers, at the time the samples were taken last fall, were asked to give the name of the variety they thought they had. This was noted by the elevator man concerned and the grain was graded. Now, we are classifying the resulting grain under these three heads: Good, which is fairly pure seed which can be used; passable, suitable seed for carrying on with for a while, and undesirable, made up of a number of varieties which should not be used for seed."

Defies Superstition

S.S. Pennyworth Trip Takes Notice Of Ill Omens

In setting a record passage of three days through Hudson Strait and Bay, the S.S. Pennyworth defied all the ill omens of the sea and defeated three ships in the race to the first vessel into the new Canadian port this season. First of all triumph docking was accomplished Sunday, the 13th.

She sailed from both Glasgow and Antwerp on Friday, and made her berth at Resolute Bay, after clearing from Antwerp. She picked up her pilot at Churchill Sunday at 13 hours 13 minutes, ship's time, 13 days after leaving the British Isles at Pentland Firth, and so became the 13th ship to reach Churchill from Europe since the port was established two years ago.

When the ship's log was hauled in outside Churchill harbor, it registered exactly 13 miles, and the forward end showed a draft of exactly 13 feet when the ship was moored at the dock.

And then Captain Giffon remembered he celebrates his birthday on the 13th.

Quite An Occasion

Royalty Used To Take Ocean Dip With Great Ceremony

It is said to have been George the Third's bathing machine, with its royal arms, fulfilling the function of a tool-shed: Weymouth should have a better memory than that. It might remember that day which Fanny Burney speaks of, when his majesty stepped down to the briny to the strains of the National Anthem secreted in a neighboring machine. It took the art of bathing a long time to shake off the ceremonial touch. When the Duchess de Berri visited her bathing cabin on the beach at Dieppe, she was received with a salvo of artillery; after which "the Inspector de Bains, clad in a resplendent uniform, cocked hat, and white gloves, led her royal highness into the sea until the water reached his knees, when he retired with three profound obeisances."—London Observer.

New Definition

An optimist is a man who rejoices in news of drought, floods, locusts, chinch bugs, tumbleweeds, phylloxera, hoof and mouth disease, boll weevils and other constructive forces tending to raise prices. A pessimist is a man who disseminates news about the growing weather, thriving flocks and other factors inimical to a firm price structure.

Daylight Films

Film theaters in Rome have adopted the invention of an Italian scientist which permits them to show moving pictures by daylight or when the playhouses are brightly illuminated. Numbers of patrons to whom darkness is an attraction while pictures are being exhibited are protesting.

A portable telephone has been invented to enable a motorist, carrying the instrument in his car, to play in at sockets attached at frequent intervals to telephone lines and get a connection without leaving his car.

May Refine U.S. Gold Here

Plan To Ship U.S. Gold Ore To Canada For Smelting

The bulk of the United States annual production of gold ore and concentrates amounting to 40,000,000 tons may soon be smelted and refined in Canada. From large and small gold mine owners in scattered parts of the U.S. Republic, permission has been asked from the Dominion Government to ship their ore and concentrates into this country. Representatives of gold mines in Alaska have asked for similar permission.

Under the proposal, the United States mine interests would be able to receive world market prices for their gold in place of the fixed American mint price of \$20.67 per ounce. The average price in Canada for late has been running about \$29.50 per ounce.

Canadian smelters in northern Ontario, and at Trail, B.C., would smelt the U.S. and Alaska gold ore and concentrates. It was stated, if the proposal is achieved, the process of refining into pure gold would be performed at the Royal Mint at Ottawa. If the requests are granted, regulations of the Canadian mint which provide for refining in that institution of Canadian-mined gold, of necessity will be broadened.

The way to ship gold concentrates and "unmelted ore" out of the United States was cleared in Washington recently when gold export prohibitions were amended by the treasury department to permit the metal being sent out of the republic in those forms. Unrefined amalgam and cyanide precipitates also are allowed to be shipped out under the Washington ruling.

Canada's embargo of October, 1931, against the shipment of gold from Canada is still effective. This decree prohibits shipping gold out of this country except under license. Since that date, the Dominion has been paying a premium on gold to Canadian mine owners who are receiving world prevailing prices.

With few exceptions, the Dominion Government has been the only shipper of gold from Canada, since October, 1931. In the instances where permission has been granted by the department of finance to export gold, the licenses, it is stated, have been where certain impurities required special refining treatment and the gold in its final refined state was shipped into Canada.

The question has been raised that United States gold coins might be converted into Canadian currency, producing a profit by the process through reconversion into U.S. funds. Official enquiry elicits the statement that conversion of U.S. gold coins into Canadian currency would have to be done in the final act through the Royal mint and such conversion is prohibited. No United States gold, it is declared, has been purchased by the Dominion Government in Canada during the past 20 months.

Good Fishing In Alberta

The best fishing for thirty years in many of the streams of Alberta is reported by the Provincial Director of Fisheries. The introduction of Loch Leven trout into tributaries of the Red Deer River has been successful to a marked degree, and there is reported to be an abundance of trout of various species in the Elbow and Highwood Rivers near Calgary.

Predicts Toothless Race

Dr. Hugh MacMillan, of Cincinnati, predicted human teeth are destined to become useless appendages—100,000,000 years or so. In a semi-jocular vein he told delegates to the centennial dental congress at Chicago, concentrated pre-digested foods in the distant future would make teeth unnecessary.

Each passenger riding in a Turkish commercial aviation airplane is automatically insured for \$4700.

Britain To Build Ships

A substantial addition to the British navy, including several cruisers, destroyers and submarines, is being planned as a sequel to the recent ship-building programs of the United States, Japan, France and Italy. The Admiralty is understood to be planning to provide for the program in its next budget. The ships, however, cannot be completed before 1936, because of the London naval treaty.

Photographic plates are now kept in refrigerators to preserve their quality and uniformity. This treatment is particularly adapted to plates intended for astronomical purposes.

Time will tell whether President Roosevelt will be able to cure his country's ills, but it has to be admitted that he has a lovely bedside manner.

Two-thirds of the passenger automobiles being sold in Sweden are American.

PUFFED SLEEVES ADD DRESSY APPEAL TO SLIM-LINE TAILORED DRESS

It is as interesting at the back as it is at the front.

And equally smart made with long or with short sleeves as in the miniature view.

For everyday occasions, you'll probably choose the long sleeves and carry it out as the original. It is flattering Eleanor-blue shade in a novelty shadow striped printed crepe silk. For the round shoulder yoke and puffs of the sleeves white crepe was used.

It's especially youthful with short sleeves in grey crepe silk. Style No. 382 is designed in sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust. Size 16 requires 3 1/2 yards of 39-inch material with 3/4 yard of 39-inch contrasting.

Price of pattern 20 cents in stamps or coin (c.o.d. is preferred). Wrap cut carefully.

How To Order Patterns

Revival In Horse Breeding

Demand For Work Horses Greater Than The Supply

Mr. Carl Roberts, Federal Horse Promoter for Manitoba, under the Dominion Live Stock Branch, states that the demand for work horses is greater than the available supply, and that this condition has brought about the formation of several stallion clubs in the province. Many farmers, according to Mr. Roberts, are looking for horses with which to bring their own stock up to the required strength, with a consequent revival of interest in horse breeding.

A young Japanese author, Yuzuko Tsurumi, turns out a full-length book in less than a month and in so doing writes over 14,000 Japanese characters daily.

Increased orders are forcing cotton spinning mills in Germany to speed up production.

LORD BESSBOROUGH VISITS MILITARY CAMP AT PETAWAWA

Our picture, taken when the Governor-General visited Petawawa Camp, Ontario, shows His Excellency observing artillery fire through powerful glasses while Major-General MacNaughton, Chief of the General Staff, looks on. On the right of the picture can be seen Lord Duncannon, son of Lord Bessborough.—Photo by Artana Studio, Pembroke, Ontario.

An Efficient Engineer

Seventeen-Year-Old Costa Rican Girl Also Clever Mechanic

Senorita Carmencita Venegas Campos, dreamy-eyed Latin beauty of San Jose, Costa Rica, can wear a man's hat, or a pair of gaudy overalls, with equal grace, but she is more at home in the latter.

For Carmencita, 17, is thought to be the world's youngest woman engineer, and the only one on the American continent.

She has her electric locomotive engineer's license, and for a time was employed by the Pacific Railroad System of Costa Rica as a regular engineer, piloting passenger and freight trains over long runs, some of which lasted overnight.

And with those soft hands of Carmencita's firmly grasping the throttle, her hustrous brown eyes peering at the two ribbons of steel flashing toward her through the headlights' glare, passengers were safe. Carmencita was an excellent engineer.

But besides piloting a train with lives of dozens depending upon her coolness and experience, Carmencita is versatile in other ways. She is an experienced motion picture operator, and has repaired hundreds of automobiles in her father's repair shop.

While but a child, Carmencita was absorbed with a curiosity to "know how things work." She tore up clocks to see what made them tick. She never got over that curiosity.

Mentality Is Different

German Character Illustrated By Incident At Outbreak Of War

Sir Austen Chamberlain's observations following on Mr. Lloyd George's revelations of pre-war diplomacy, gave voice to our uneasy feeling in this country that in Germany we have to deal with a mentality most foreign to our own. This divergence of character was aptly illustrated by an almost chimerical incident at the outbreak of the war.

When the French and German Ambassadors returned to their own countries, the former was forced to pass through Denmark instead of travelling direct to Paris. He was charged for his train out of Germany a sum which made it necessary for him to borrow cash from his staff to settle the account. The German Ambassador was courteously and gratuitously provided with a special train to Berlin, and the Germans by way of acknowledgment of this gracious act, commandeered the French train, and kept it! This action violated what Sir Austen rightly calls "an idea fundamental to all British parties," and reminds me that Germany, in more senses than one, is not a cricket-playing country.—London correspondent Ottawa Journal.

Seller's Turn Coming

Buyers Have Had Advantage Of Market For Some Time

For the past two or three years, Canada has been enjoying a buyer's market. Prices have been so low that the bottom has dropped out of values. Although they did not take advantage of it, people with money to spend were able to secure greater value for their money than for many years.

Now a change is on the way. It is coming as a result of economic improvement and as a result of the application of natural forces. Weather conditions have decreased the productivity of the land, and farm crops in almost many places, are a complete failure. This is going to lessen supply, while, thanks to the increase in spending power of the wage-earners, the demand is going to increase.

The seller's market has not come yet, but it is coming. Buyers still have the advantage, and if they are wise they will use it to the fullest possible extent before the price increase movement gets too far under way and robs them of the advantages which are theirs at the present time.—Ottawa Times.

Bombay, India, now has 2,621 industrial establishments.

Individual Effort of Every Citizen Is Needed To Work For Solution And Elimination of Economic Ills

New Kind Of Madness

Mild Man Turns Into Maniac When Driving Car

Powerful stuff—gasoline. There is a kind of gasoline intoxication that changes the entire nature of some men. Sometimes it is found that even the mild-mannered man who loves his family, is kind to animals and courteous to everybody, cannot stand gasoline at all. As soon as he gets into an automobile he isn't polite to anybody but a policeman.

On foot, he says "You first," or "Pardon me, sir, may I step ahead?" or "That's all right, old man. I'm in no hurry." But seated in a vehicle propelled by gasoline, he gets a megaton view of the value of time. He may not be going anywhere in particular but he wants to get there right away.

He watches for the smallest opening to jam ahead. If he is thwarted in the attempt, he glares at the fellow who gets in his way and perhaps hurls an insulting epithet. If there is an unavoidable delay for a moment, he bawls his horn, and the aggregate efforts of the entire group of gasoline-intoxicated maniacs turns boiling loose.

Filling the air with raucous mechanical blowing, howling and screeching is an attendant symptom of gasoline madness. Dashing ahead through traffic and honning everybody out of the way is another. The manifestations vary with age and temperament of the subject, but even in the mildest natures the tendency is toward crude manners and lack of consideration.—Kingston Whig-Standard.

Air And Stored Potatoes

Through Circulation Of Air Is Necessary To Keep Stored Potatoes In Good Condition

Careless storing of wet potatoes is responsible for unnecessary annual losses. Potatoes ought to be stored dry in a cool, well-ventilated cellar which is perfectly dark. Piling potatoes in heaps warm and poorly ventilated cellars creates the most favorable conditions for rotting. Before placing the potatoes in a cellar, wooden slats slightly apart should be nailed about six inches or more from the walls, and a temporary floor with cracks between the slats should be laid down six inches above the permanent floor. This will ensure air to circulate around and under the pile of potatoes. If it should so happen that the pile has to be very large, square ventilators made of wooden slats and running from top to bottom of the pile should be put in here and there. Together with the circulation of air at the sides and at the bottom of the pile, these ventilators will keep the potatoes in a much better condition than if they were in a solid pile. Another good plan recommended by the Dominion Department of Agriculture is to keep the potatoes in large crates made with slats, the ventilation between the crates assisting very much in keeping the potatoes in good condition. The temperature of the storehouse or cellar should be kept at nearly 33 or 35 degrees Fahrenheit as possible.

Names Just Reversed

Puzzle Of Odd Signs In New York Easily Explained

The business of one of those observant fellows who are bothered by odd signs has taken him along Chryse Street several times of late, and he discovered a peculiar thing. At No. 63 is a firm of jewelers named Kovitz & Pashutsky, and five doors away, at No. 51 is the jewelry firm of Pashutsky & Kovitz. This got on his mind to a point where he went into one of the places and demanded an explanation, which was graciously given as follows: The firm of Kovitz & Pashutsky was founded at No. 63 fifteen years ago, and the two partners took a younger brother of each in as clerk. All went smoothly until it was felt the firm wasn't doing well enough to support all four. The younger brothers were advised to seek new jobs. They went up the street and opened a shop, reversing the names in the original title. There was some hard feeling at first, but now all speak cordially when they meet. Both firms seem to get enough business.—The New Yorker.

Sunshades Not For Men

The sight of hardy engineers in New Jersey working under the shelter of sunshades aroused not a few persons to titillating comment until County Engineer Radigan explained the umbrellas were for the protection of the instruments, not the men. "The best instrument is the sensitive," Radigan said, "the effects of the rays of the sun would cause an error in the work."

Are you thin or fat? If you are here is advice for you. If you are thin, don't eat fast, and if you are fat, don't eat—Fast.

Argentina expects bumper crops this season.

Individual effort by every citizen

frankly facing his or her problem and thereby making a maximum effort towards its solution was the high road toward elimination of economic difficulties. Speaking at Ottawa recently, Hon. H. H. Stevens, Minister of Trade and Commerce, put forward this belief.

"First," said Mr. Stevens, "the individual citizen should study how he or she can contribute towards the relief of those in need. Not by giving charity but by a sane effort to use the resources that each has, in a useful way so as to provide added employment for those who require it." Painting or repairing the home, purchase of clothing or any other useful means, he illustrated, would give employment of personal resources and afford the finest contribution which could be made at this time.

"I challenge the right of a landlord to receive rentals from an insubstantial and dilapidated building when he is financially able to replace it with a decent structure." From this proposal alone there could be afforded enough new and needed construction to give such stimulus to the economy as to materially, if not wholly eliminate want and suffering.

At no time had the number on relief in Canada exceeded little more than 10 per cent. of the population, and this total had been reduced, declared Mr. Stevens, to the minimum of 90 per cent. put forward the best effort of which each individual was capable, a substantial absorption of those in need could be achieved.

Touching on the world economic conference, he said to term it a failure is a mistake. Without doubt, the gathering together of such a concourse of distinguished persons and the personal contacts which inevitably ensued, must bear fruit in the future.

The steady increase of the business of Canada with other parts of the empire as a result of the Imperial conference agreements, said Mr. Stevens, gave evidence that where genuine efforts of co-operation were made results advantageous to all may be achieved.

Chemical Weed Killers

Investigation Being Made To Discover Effective Weed Killers Free From Fire Risk

Fire hazards in the use of oxidizing agents as herbicides formed the subject of an investigation by the Division of Agriculture and Forestry of the National Research Laboratories in co-operation with the Department of Field Crops, University of Alberta, the results of which are reported in the June issue of the Canadian Journal of Research.

In recent years chemical treatment has gained some prominence as a practical method of killing weeds. Certain oxidizing agents, known as chlorates, constitute the toxic principle of several commercial herbicides now used quite extensively. These herbicides have the advantage of being practically non-poisonous to livestock but their use is known to be accompanied by a fire risk, for when chlorates dry on combustible material such as clothing, wood, straw, or dead weeds, the contaminated material is so inflammable that it is easily ignited by a spark, heat, or friction. Several serious fires having been traced to the use of chlorate herbicides, this study was undertaken in order to determine the combustibility of organic-matter-chlorate mixtures at different relative humidities and the efficacy of certain protecting agents.

The experiments, performed by Dr. W. H. Cook, showed that pure sodium chlorate in contact with combustible material is extremely dangerous under the dry atmospheric conditions frequently occurring in western Canada. Commercial weed-killers usually contain a certain amount of some moisture-absorbing chemical, thus rendering the material less dangerous, but it was found that in practice this does not remove the fire risk completely. Further experiments were therefore undertaken in order to determine the amounts of such moisture absorbing chemicals necessary to give complete protection.

Owing to the relatively large proportion (one-third or more) of the protecting substance which is found necessary to employ, the resulting "safe" herbicides are considerably less effective as weed-killers than the pure chlorates. Investigations are now being carried on with the object of discovering more effective chemical weed-killers entirely free from fire risk and other hazards.

Brazil's New Industry

Brazil is confident that competitors will not maintain their gains in the coffee industry as growers there can produce coffee more cheaply than any place in the world and are looking forward to substantial returns from the new industry which makes paint out of coffee beans.

RUSSIA'S FAMINE

A statement in an interview published on Wednesday must have proved startling. It was made by an Edmonton lawyer, Mr. Lasarovich on his return from nearly a year to Europe, most of that time being devoted to the study of the situation in the Ukraine. That area, which had been considered the granary of the continent, was "today the centre of the most appalling famine in its history, due to the internal strife and bad government in the various states."

How can this be true, one must ask after all that we have read during the past two or three weeks about the huge crops in Europe and the consequent cutting down of the supplies that it needed to purchase elsewhere? But it is supported by other sources of information. Last week a Vienna dispatch told of an appeal on behalf Russian famine victims that had been made by the cardinal archbishop of that city. He felt the necessity of calling on public opinion throughout the world for help.

It is already established, declared the cardinal, that catastrophe still obtains, even at this time of the new harvest. It will in four months reach a new peak. Once again millions of lives will be lost.

A few days later, it was reported from Berlin that the papers there were full of stories about the terrible conditions known to exist in Russian agricultural sections. This effort to raise funds in Germany to relieve distress among the Russo-German inhabitants of the Ukraine was, we were told, being intensified. An American correspondent, after learning what one of his countrymen and two Germans who had just returned from Russia had to say, called that the indications were that the estimate of 4,000,000 deaths due to malnutrition in rural Russia during recent months was too low.

Strong official denials of all this came from Moscow, while Mr. Duranty, who has represented the New York Times there since shortly after the war and who stands high in the confidence of the Soviet authorities, described the famine reports as exaggerations or malignant propaganda in view of the excellent harvest about to be gathered. But he went on to say that "the food shortage which has affected almost the whole population in the last year and particularly the grain growing provinces, has caused heavy loss of life."

He put the death rate last winter and spring at four times the normal which would make it from 80 to 100 per thousand persons.

How appalling is such a rate is brought home by the fact that it is about 12 per thousand in the United States and, as a bulletin just issued shows, only 9.9 in Canada. Despite all the hardships that the depression has caused, there has been a steady

decreasing mortality in this country for the past three years. To those who hold up Russia as an example of Canada, the sharp contrast is commended. The Russian shortage has not been due to climatic conditions such as was responsible for the famine of 1922-23, but solely to the government farm collectivization policies as the Times points out in commenting on its Moscow correspondent.

If this is the case, the reports to the effect that those are working out much better this year and that the Russian food situation is accordingly much improved, with favorable production weather, may be found to look too much on the bright side of things. In any case, it is impossible to believe, after the experience of recent months there, that Russia will send much grain outside her borders, however much the government may require the money from such sales. The available supplies and a great deal more besides will be needed at home.

IKE AND JAKE'S SHOP

A new enterprise has come into being in Lacombe. "Ike" MacDonald and "Jake" Thompson have recently opened up a Auto Wrecker's business where car parts of every make, both popular and unpopular can be purchased for a mere pittance. You can also have your radio repaired, your automobile generator overhauled and rewound, your house re-wired, in fact these boys are prepared to do any kind of electrical or mechanical work. They have some Essex parts, also Ford, Chevrolet, etc. Give these lads a break and get your next car parts from them. Their shop is located next door to the Fraser-Macdonald Agency.
